IT industry

Value added info services

Consulting, contracting

Research and Education instit.

Project Information

Project focus	eEnergy
Project theme	Other
My role	Coordinator
Partner criteria	The project performs internet-based (portal) energy management functions over ADSL such as organizing energy use data, identifying energy consumption anomalies, managing energy costs, and automating demand response strategies and focused customer profiling. In this project, an innovative web-based intelligent Energy Information System (google-like machine) is created, for optimal energy management
